-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, drawn to a roofing tile, classified in class 428, subclass 156.
  - II. Claim 4, drawn to a method of delaying the spread of flame-melted or hazardous materials, classified in class 52, subclass 554.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed in Group II can be practiced with another materially different product without the specifics of the Group I product i.e. a generally rectangular element having lateral edges, ribs formed in a generally crossing pattern and form means etc.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Daniel O'Connor on 7/5/05 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-3. Affirmation of this election must be made by applicant in replying to this Office action. Claim 4 is withdrawn from

further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Ternes et al. (US 5,992,116).

Ternes et al. discloses a roofing tile comprising a generally rectangular element having lateral edges and top and bottom portions (Fig. 2, #10 and #16; also see col. 3, lines 27-30), wherein one side of the tile has a plurality of ribs formed thereon (Fig. 2, #30), wherein the ribs increase in depth from the top portion of the tile to the bottom portion of the tile (Fig. 2, #30), wherein the ribs are formed in a generally crossing pattern and form means whereby compartments are present and comprise increasing volumes from top to bottom (Fig. 2, #30 and Fig. 4; also see col. 3, lines 61-65), the tile providing means (Fig. 2, #30) whereby fire or flame

spread is significantly reduced (see Fig. 2, shown below). Regarding claim 2, the ribs are shaped to form diamond patterns to reduce flame spread (Fig. 2, #30; also see col. 3, lines 61-64).

Regarding claim 3, note smaller triangular areas formed at lateral edges of the tile, the triangular areas having upper portion means for directing a flame-melted material to a center portion of the tile (see Fig. 2 shown below).
